

awesome-DeepLearning 提pr流程

1. 打开【终端】，进入想要存放repo文件的目录下

比如这里想存放在 Desktop/examples/目录下

A terminal window titled "examples — -bash — 80x24" with standard macOS window controls. The terminal output shows the last login time, a message about switching to zsh, and the user navigating to the Desktop/examples directory. The command "cd Desktop/examples/" is highlighted with a red underline.

```
examples — -bash — 80x24
Last login: Tue Jul  6 11:04:18 on ttys000

The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/HT208050.
[(base) B0000003883369D:~ zhanghandi$ cd Desktop/examples/
(base) B0000003883369D:examples zhanghandi$
```

2. 配置git

配置用户名：git config --global user.name username

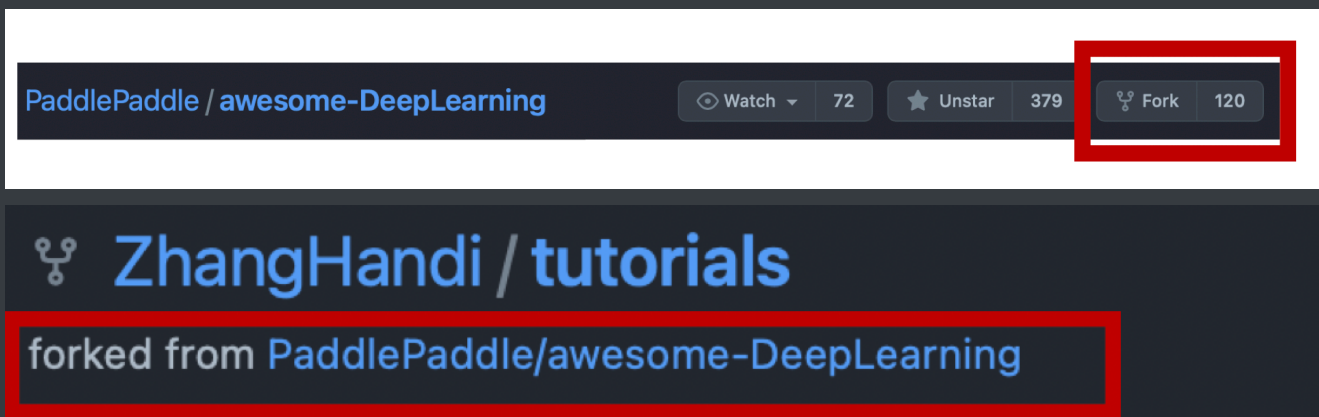

配置邮箱：git config --global user.email user@email

username 和 user@email 需要替换成自己github账号的用户名和邮箱

A terminal window snippet showing two git configuration commands. Both commands are enclosed in red rectangular boxes. The first command sets the global user name to 'ZhangHandi', and the second sets the global user email to 'user@email'.

```
[(base) B0000003883369D:examples zhanghandi$ git config --global user.name ZhangHandi
[(base) B0000003883369D:examples zhanghandi$ git config --global user.email user@email
```

3. 将awesome-DeepLearning fork到自己的github仓库中

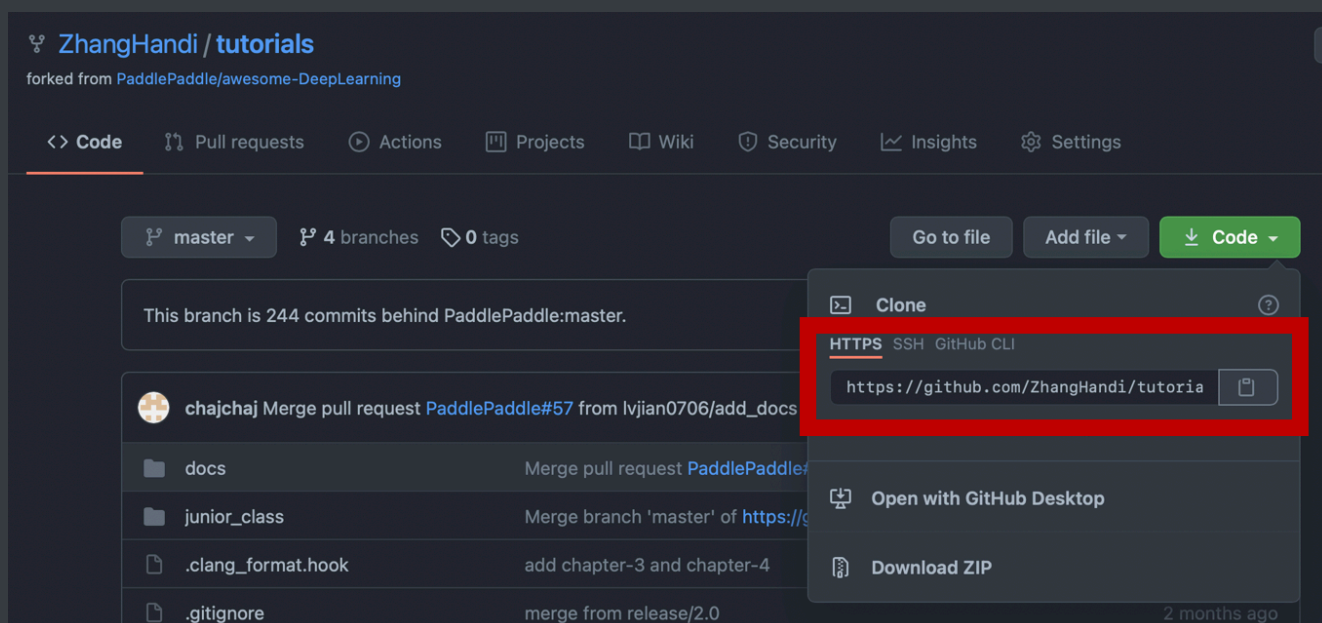

大家fork出来得到的目录应该是username/awesome-DeepLearning，这里显示/tutorials是一个名称更换问题，不用在意。

4. 在本地克隆 fork 项目

```
git clone https://github.com/ZhangHandi/tutorials.git
```

后面这个地址需要用自己github仓库下awesome-DeepLearning的地址进行替换

5. cd 到克隆的项目

```
cd awesome-DeepLearning/
```

6. 添加上游地址

```
git remote add upstream https://github.com/PaddlePaddle/awesome-DeepLearning.git
```

这个地址不用更换

7. 获取上游代码

```
git fetch upstream
```

8. 切换到上游的 upstream/master 分支

```
git checkout upstream/master
```

9. 在上游分支 upstream/master 的基础上新建 my_branch 分支

```
git checkout -b my_branch
```

my_branch这个分支命名可以替换

10. 修改要修改的部分，比如将文件放到awesome-DeepLearning中的examples文件夹下，进行作业提交

11. 添加修改的文件

```
git add .
```

12. 提交修改

```
git commit -m ''
```

''中可以添加针对修改的评论，比如：**x 组 xx add 课程名称 作业名称**

13. push 到远程分支

```
git push origin my_branch
```

14. 最后在自己的github上的pull request模块提交pr

push 后打开自己github仓库下的awesome-DeepLearning，会看到 **compare & pull request** 的按钮，点击，跳转到下面的页面，点击 **create pull request** 提交pr。

 ZhangHandi:add_docs had recent pushes less than a minute ago

Compare & pull request

Open a pull request

Create a new pull request by comparing changes across two branches. If you need to, you can also [compare across forks](#).

 base repository: PaddlePaddle/awesome-Dee...

base: master

<

head repository: ZhangHandi/tutorials

compare: add_docs

✓ **Able to merge.** These branches can be automatically merged.
